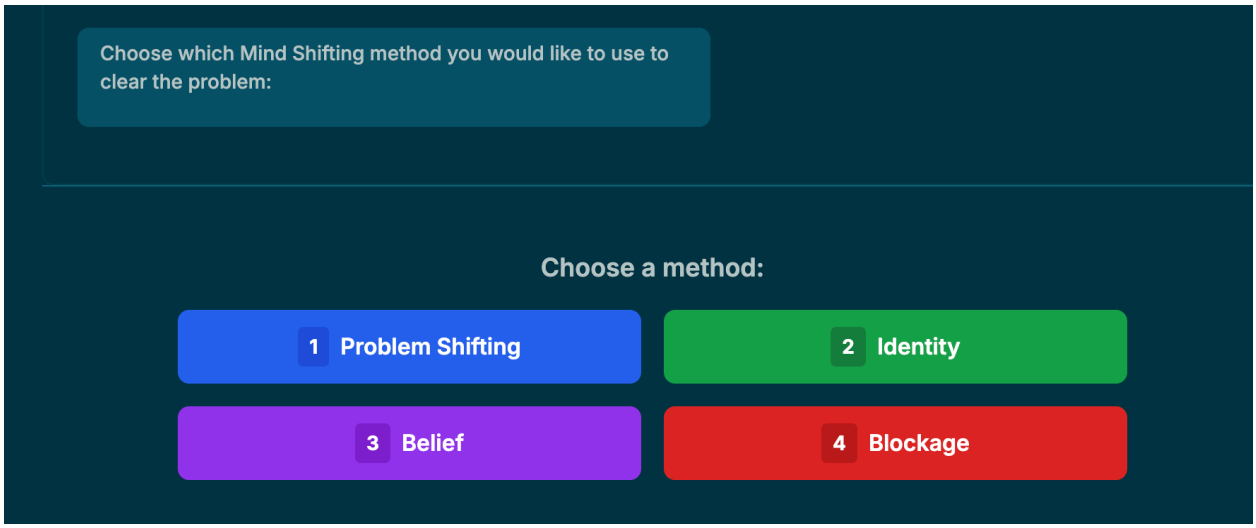
DISCOVERING WHAT TO WORK ON

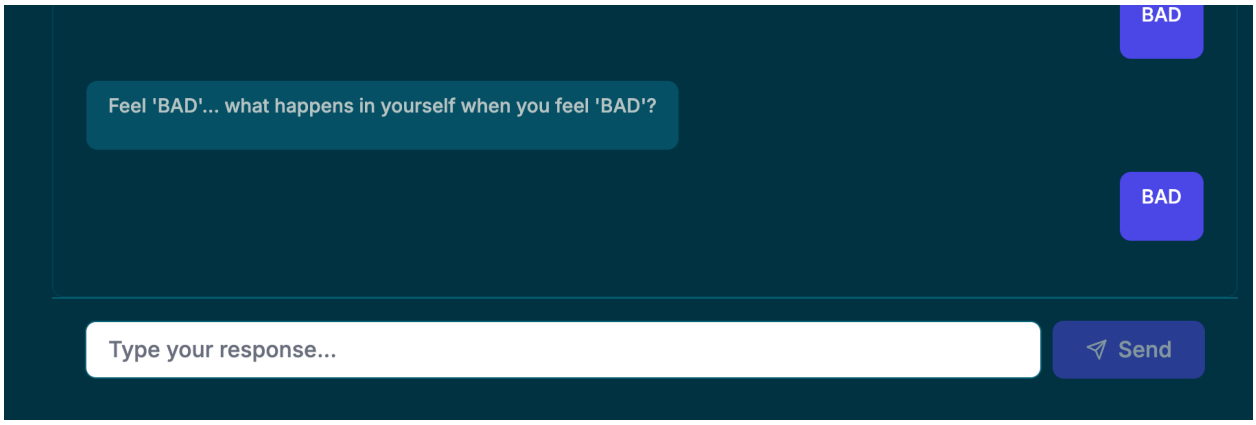
1.



These buttons should say: Identity Shifting, Belief Shifting, Blockage Shifting.

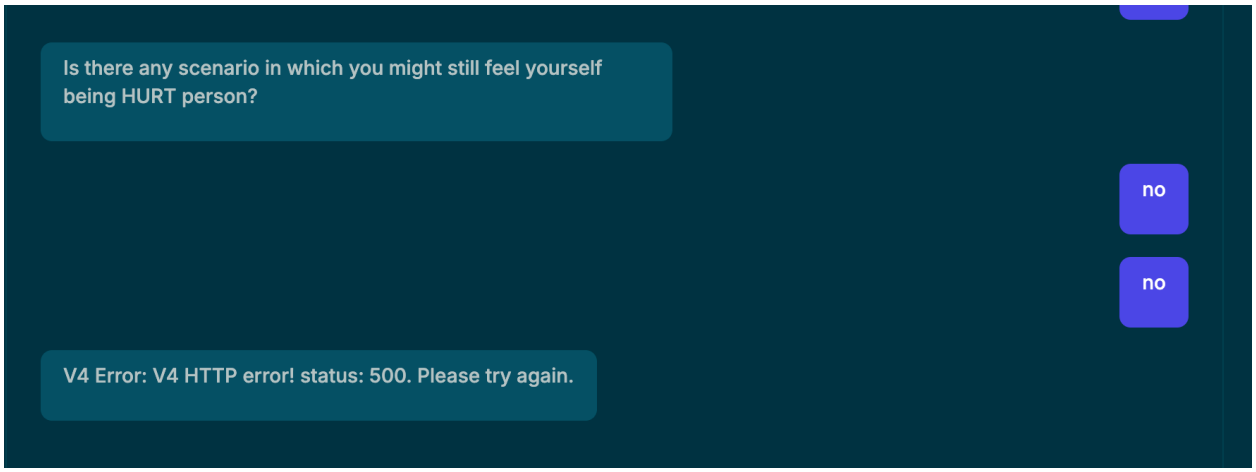
UNDO BUTTON

1.



After pressing the undo button it goes back to my last response whereas it always needs to go back to the last instruction from the app so the user can then respond.

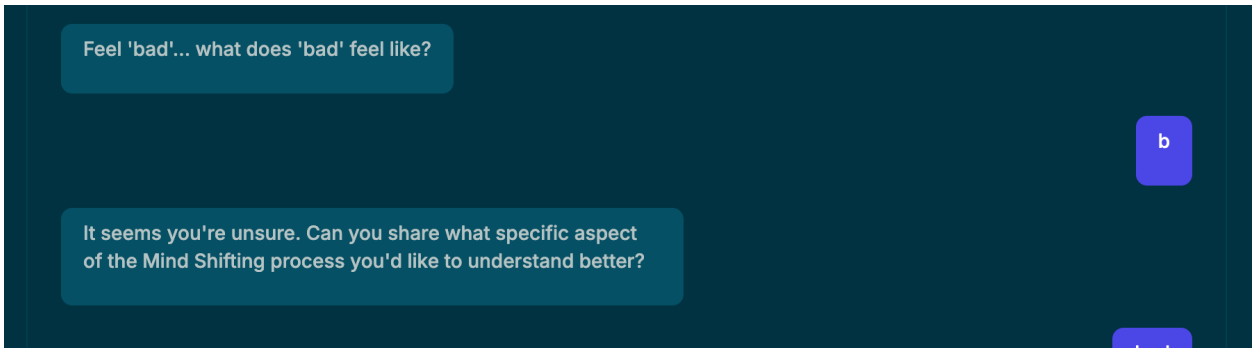
2.



When pressing the undo button during Identity Shifting (during Step 4 on the second round of Steps 2-5 with a new identity) the app went to an error.

USER ERROR HANDLING

1.

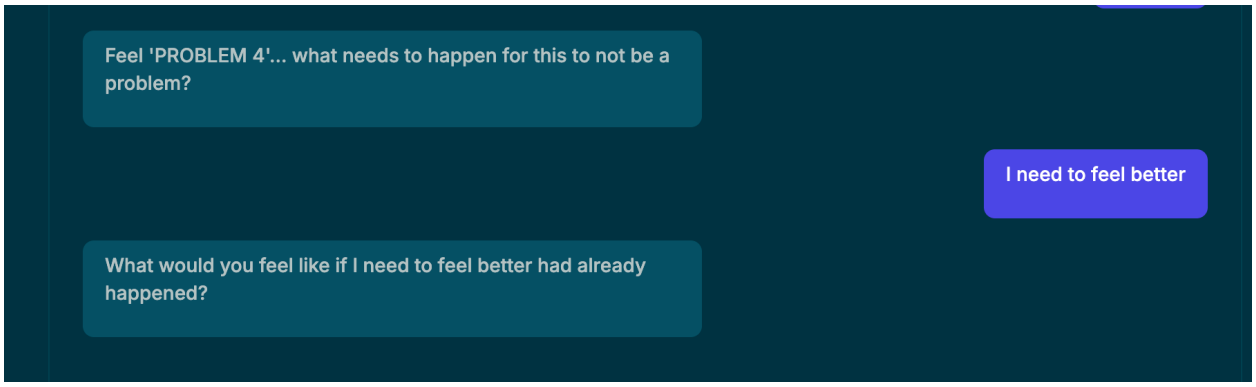


Here I answered B during a Belief Shifting process. The app should say “Let me repeat that question for you. Please answer with the first thing that comes up when I ask the question”.

PROBLEM SHIFTING

Process correct.

1.

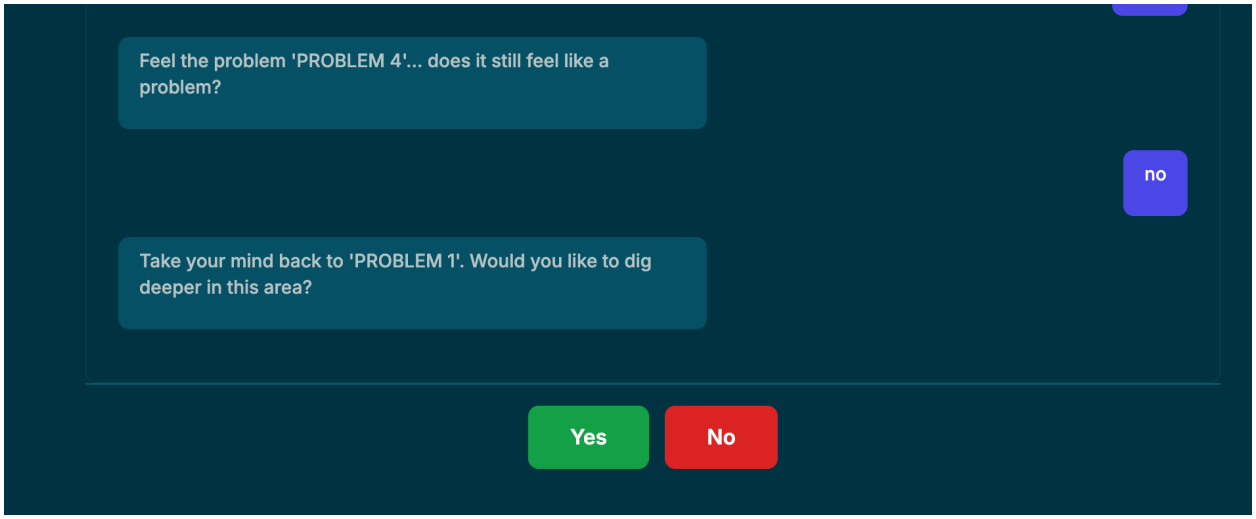


Possibly we could use AI here to reword this step like we did in previous versions but it may or may not be worth the tradeoff on speed. It would reword it by saying “What would you feel like if you already felt better?”

DIGGING DEEPER ON PROBLEMS

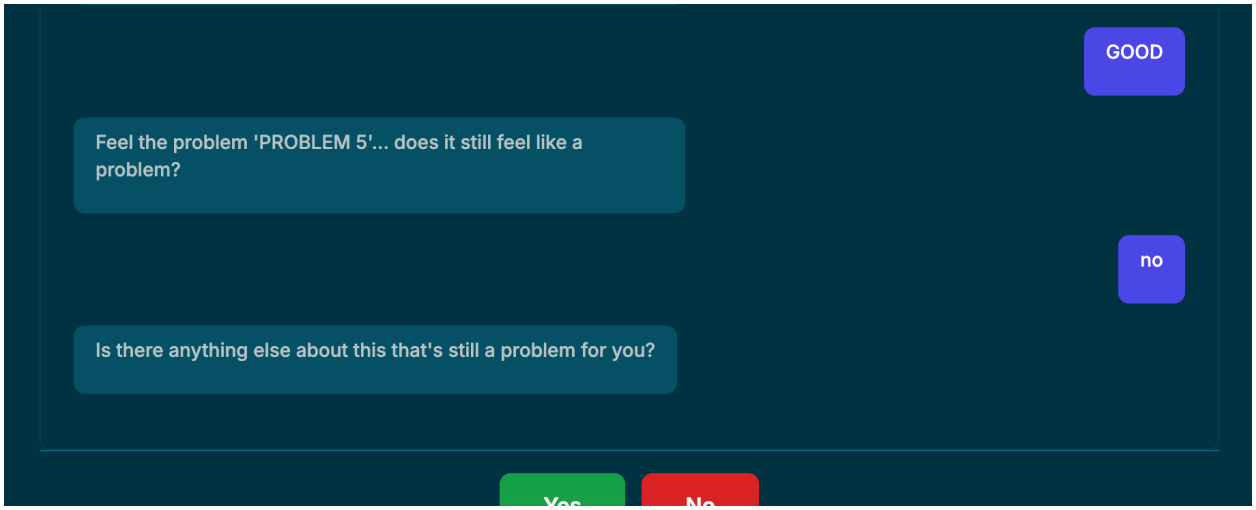
Process incorrect.

1.



Here I was on the second digging deeper question (scenario question). After I cleared problem 4 it should have gone back to that same question and asked it again for the third time. Instead it went back to the very beginning of the digging deeper process.

2.

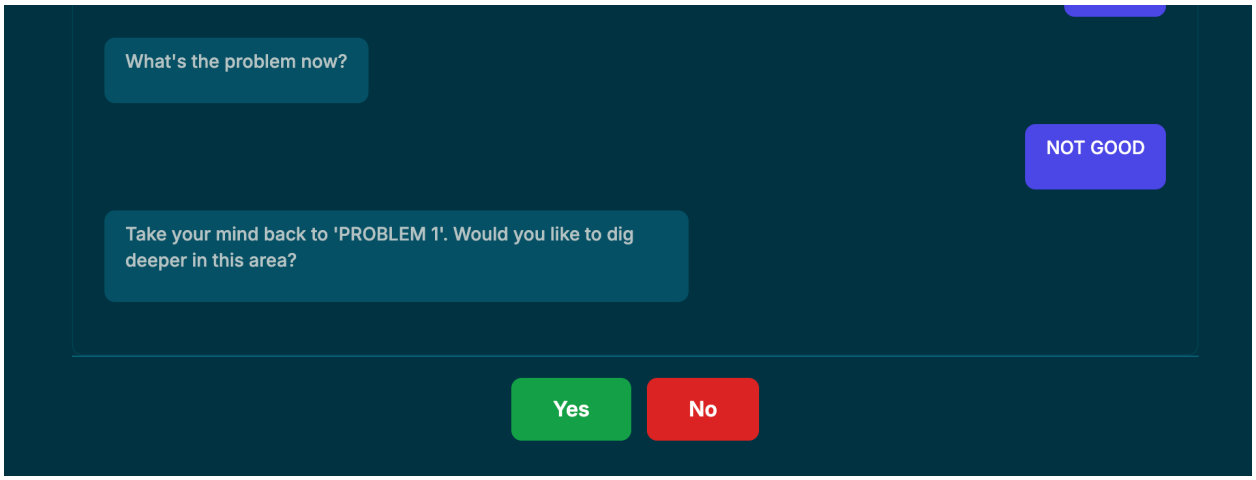


Here I was on the second digging deeper question (scenario question) and after clearing the problem (problem 5) it should have gone back to that same question and asked it again. Instead it went to the third digging deeper question.

BLOCKAGE SHIFTING

Process incorrect.

1.

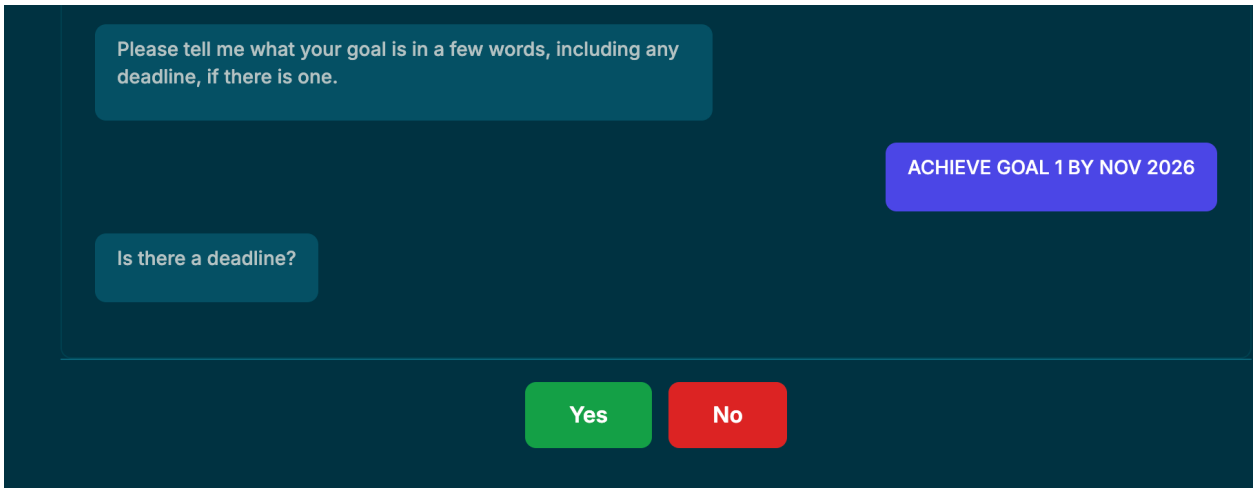


Here I had completed one cycle of Blockage Shifting. I gave the new problem for the second cycle was ‘NOT GOOD’. Instead of going back to do the second cycle of Blockage Shifting it went straight to Digging Deeper.

REALITY SHIFTING

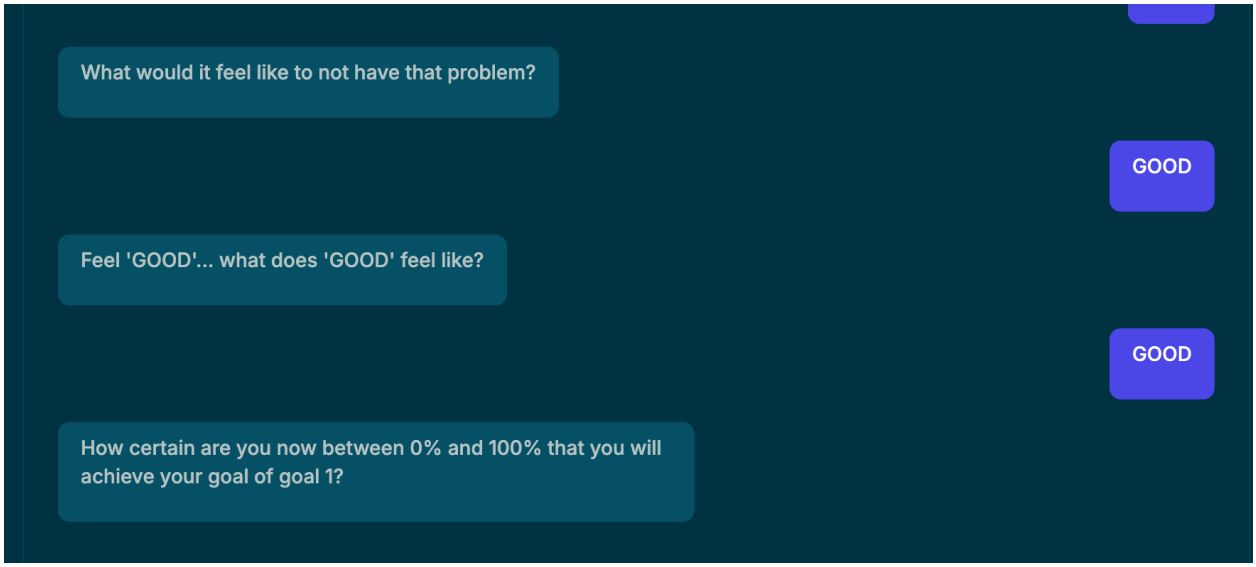
Process incorrect.

1.



Here I had already given a deadline and then it asked me again. If it is going to ask me for the deadline after then it should remove asking me for the deadline from the previous step.

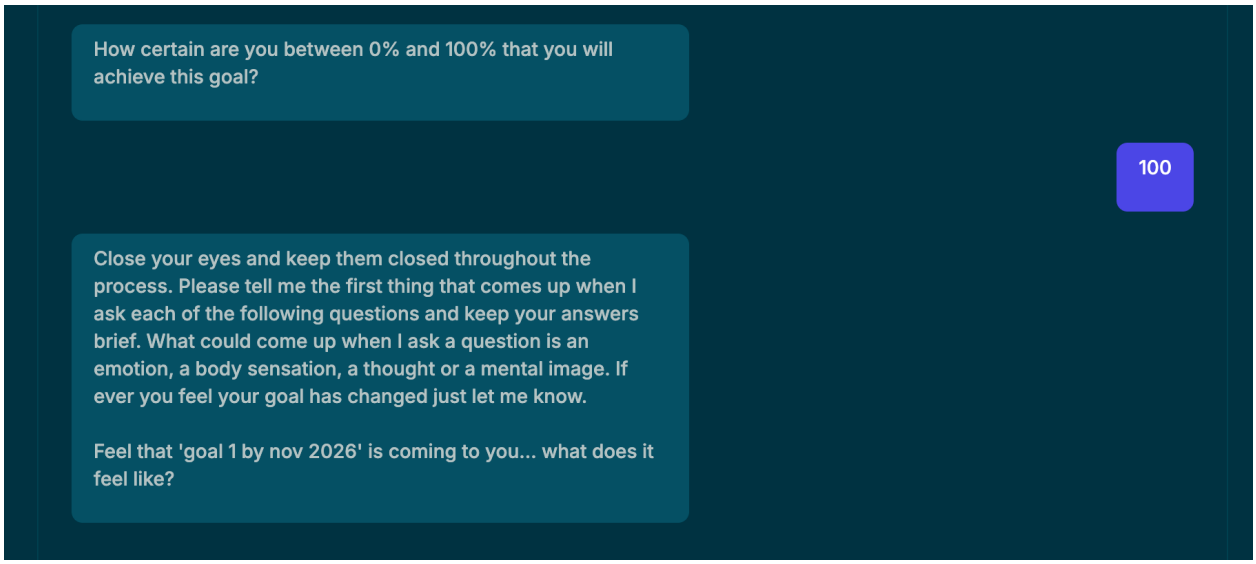
2.



Here I had gone back from Step 3 (first checking question) to Step 2B after I answered the question with less than 100%. After completing 2B it should have gone back to 2A and then kept alternating between 2B and 2A until the user answers with ‘no reason’ at 2B1, but instead it went back to Step 3.

The app did the same thing when going back to Step from Step 3 second checking question.

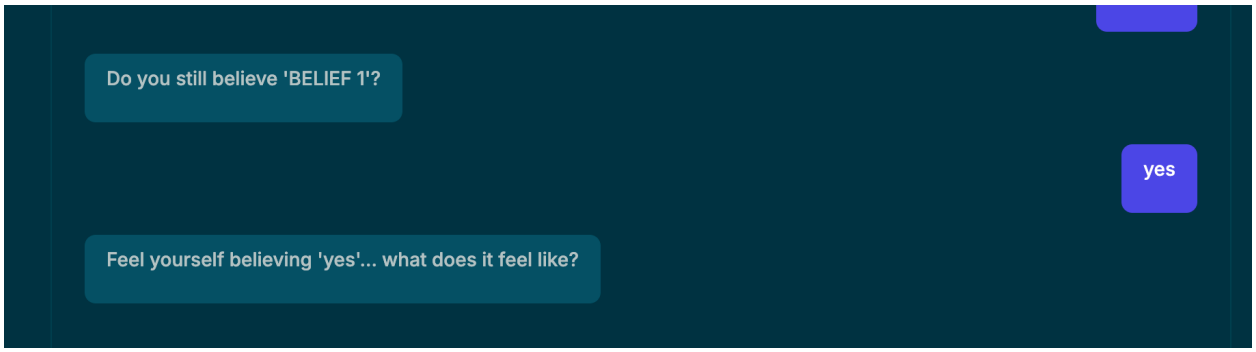
3.



Here at Step 1 I answered 100 already so the app should have gone straight to Step 3, second checking question.

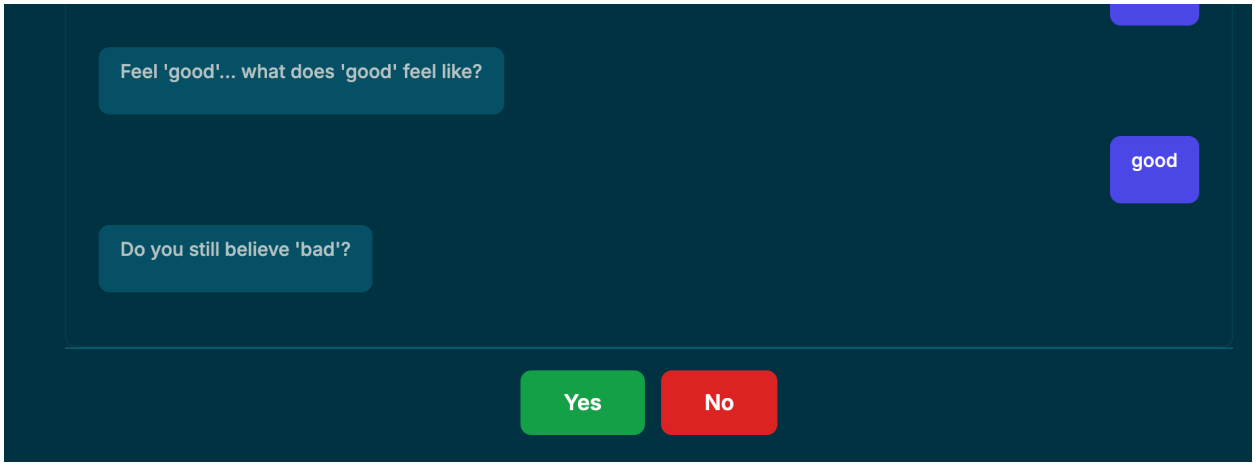
BELIEF SHIFTING

1.



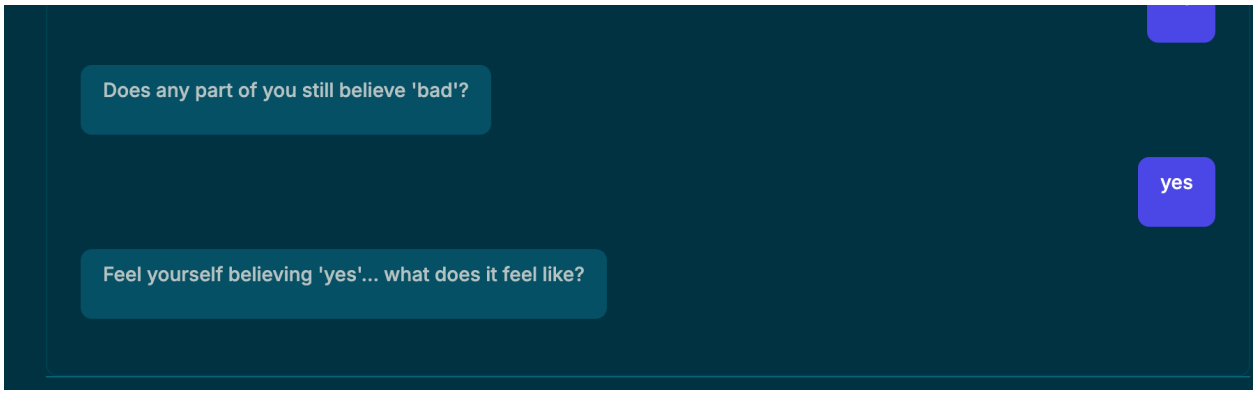
Here I am at the start of the second cycle of Step 3 and the app incorrectly read back the last answer instead of the belief.

2.



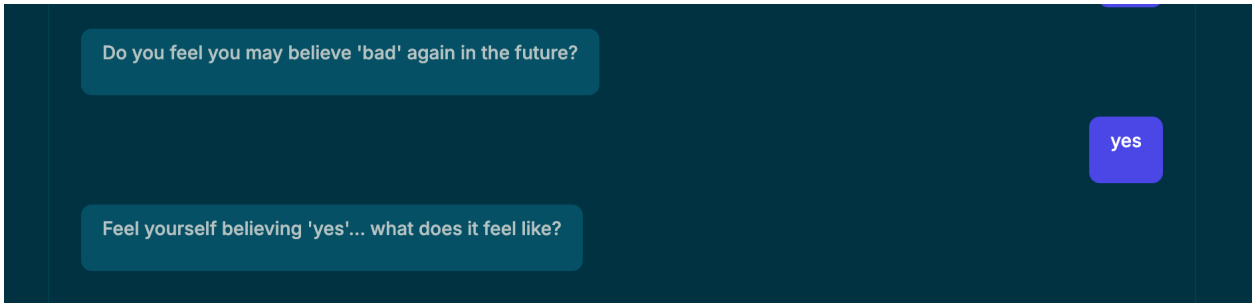
Here I am at the end of the second cycle of Step 3 and it asked: “Do you still believe ‘bad’?” instead of “Do you still believe ‘Belief 1’?”.

3.



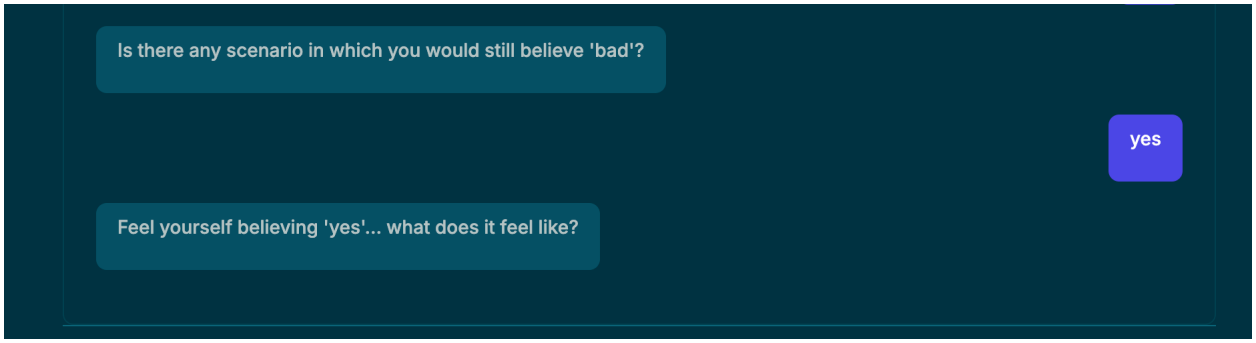
Here I am going back from Step 4 first question to Step 2 and at 2A the app incorrectly read back the belief as ‘yes’ instead of ‘Belief 1’.

4.



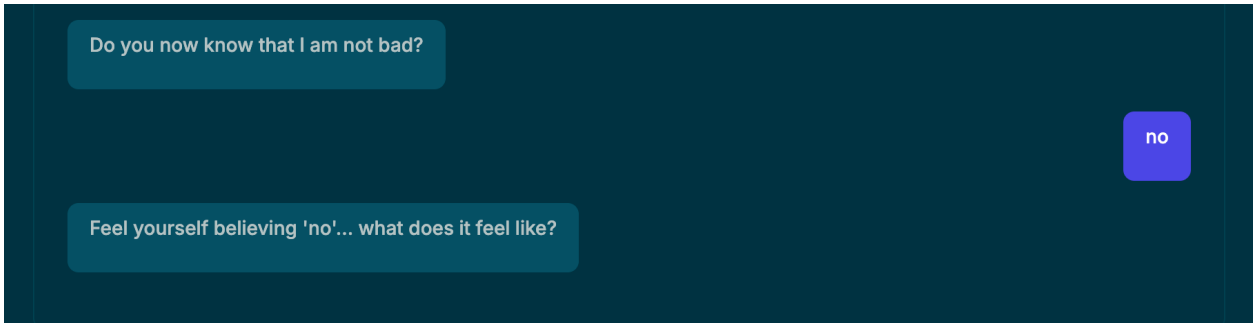
Here I am going back from step 4 second checking question to Step 3A. It should use the bridge phrase “Put yourself in the future and feel yourself believing ‘Belief 1’...what does it feel like?” It should only use this bridge phrase on the first cycle of Step 3.

5.



Here I am going back from Step 4 third checking question to Step 3A. It should use the bridge phrase “Imagine that scenario and feel yourself believing ‘Belief 1’...what does it feel like?” It should only use this bridge phrase on the first cycle of Step 3.

6.

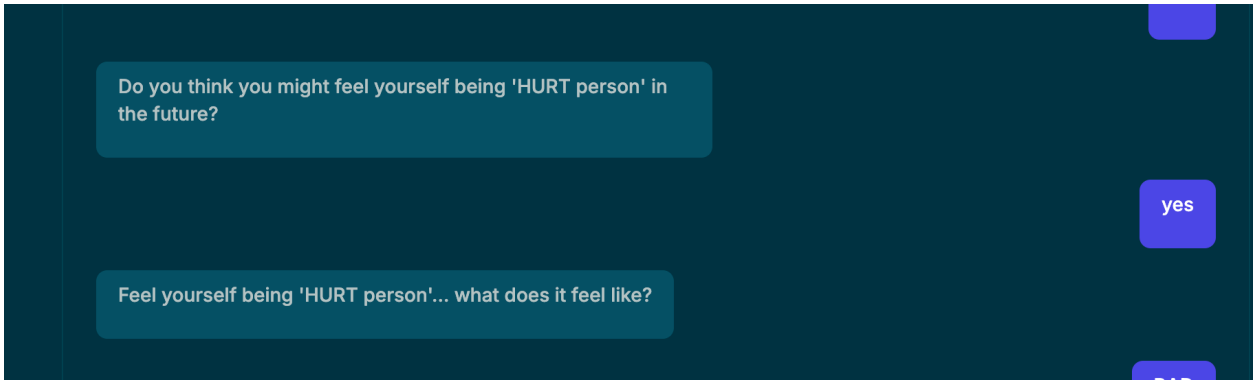


Here I am going from Step 4 last checking question back to Step 3A. It should have said “Feel yourself believing ‘Belief 1’...what does it feel like?”

IDENTITY SHIFTING

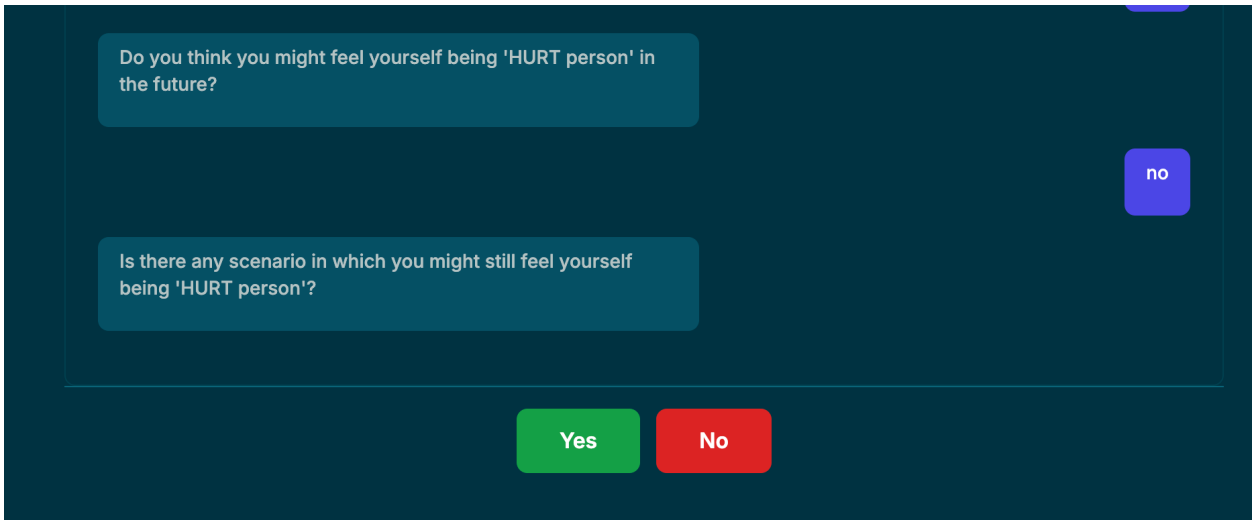
Process incorrect.

1.



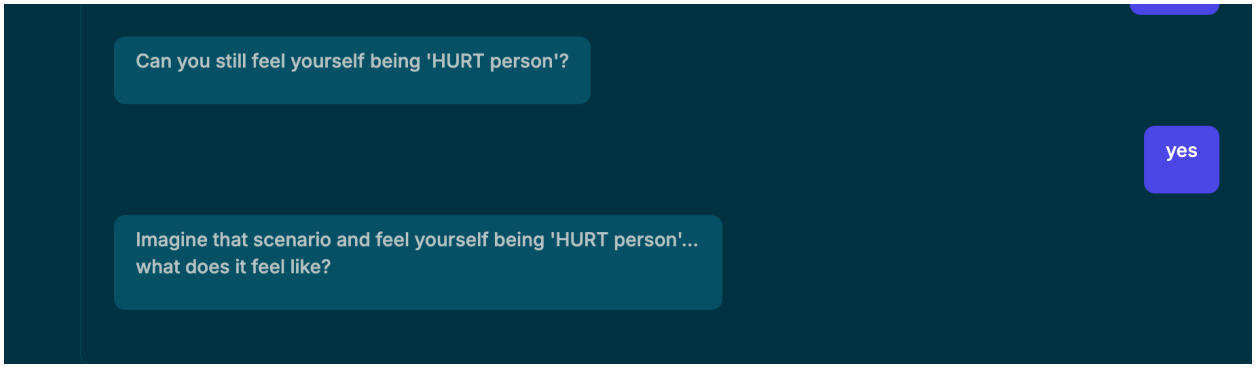
Here I am going back from Step 4 first checking question to Step 3A. It should use the bridge phrase "Put yourself in the future and feel yourself being 'HURT person'...what does it feel like?" It should only use this bridge phrase on the first cycle of Step 3.

2.



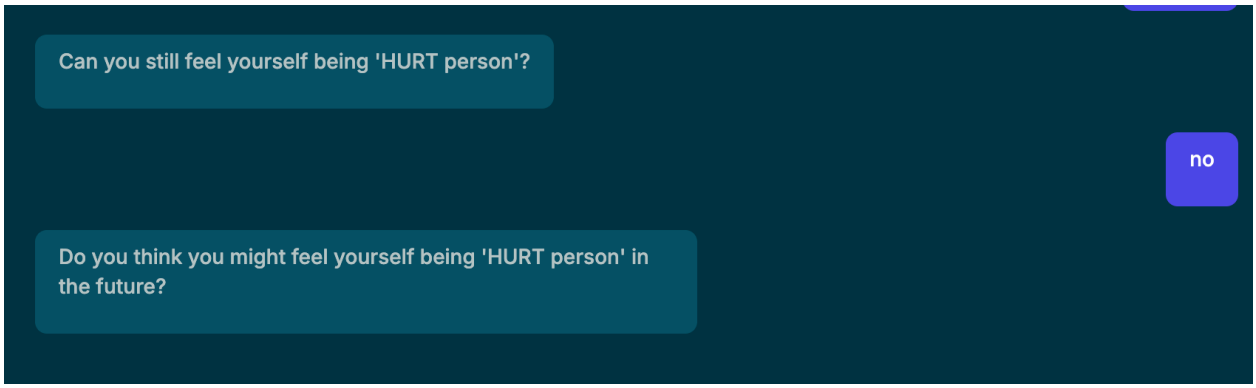
Here I have just finished a cycle of Step 3 after going back to Step 3 from the first checking question of Step 4. The app should have taken me back to the same checking question I was on in Step 4 (the first checking question). Instead it went to the second checking question.

3.



Here I am on the second cycle of Step 3 after going back to Step 3 from the second checking question of Step 4. The app correctly used the bridge phrase “Imagine that scenario…” at Step 3A of the first cycle, however it should not be using it here on the second cycle or beyond. It should only use the bridge phrase on the first cycle.

4.

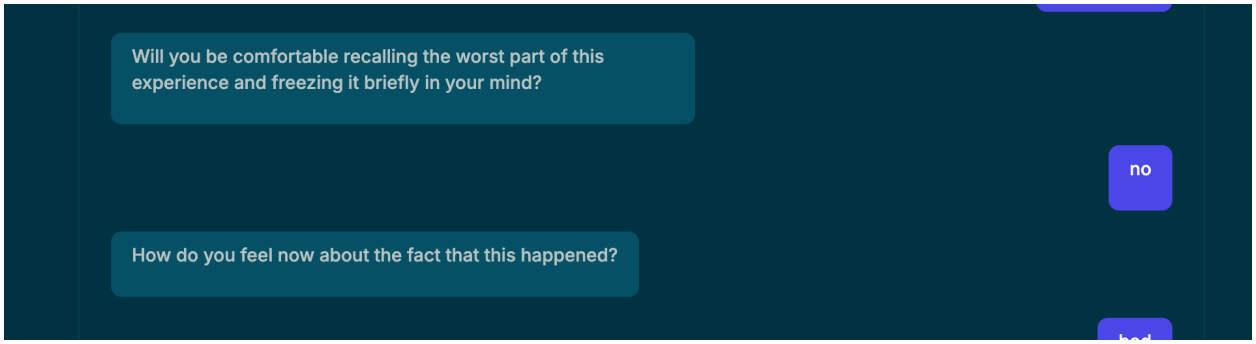


Here I have finished the second cycle of Step 3 after going black to Step 3 from the second checking question of Step 4 (scenario question). So the app should have gone back to that same checking question, but instead it went back to the first checking question (future question).

TRAUMA SHIFTING

Process incorrect.

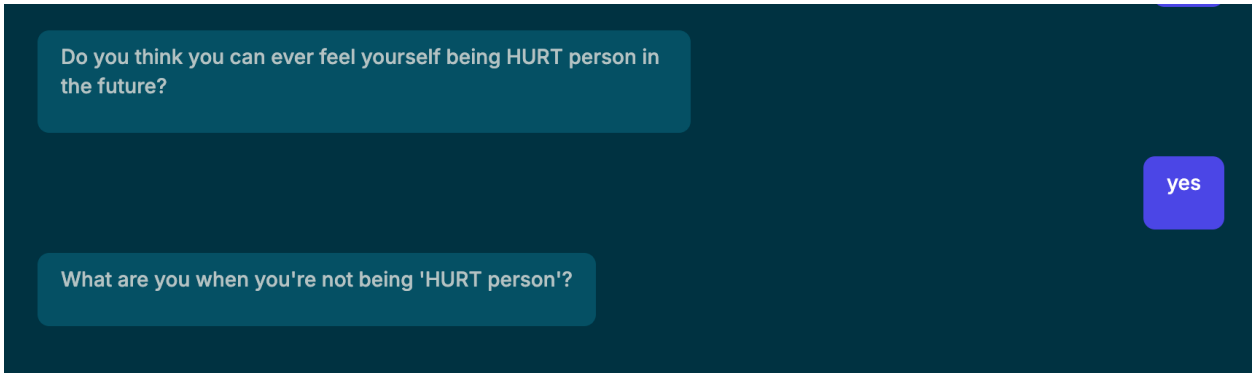
1.



Here I answered “No” at Step 2. The app is correctly choosing the right pathway of turning the memory into a current problem. However, it needs to explain what it is doing first so it should say:

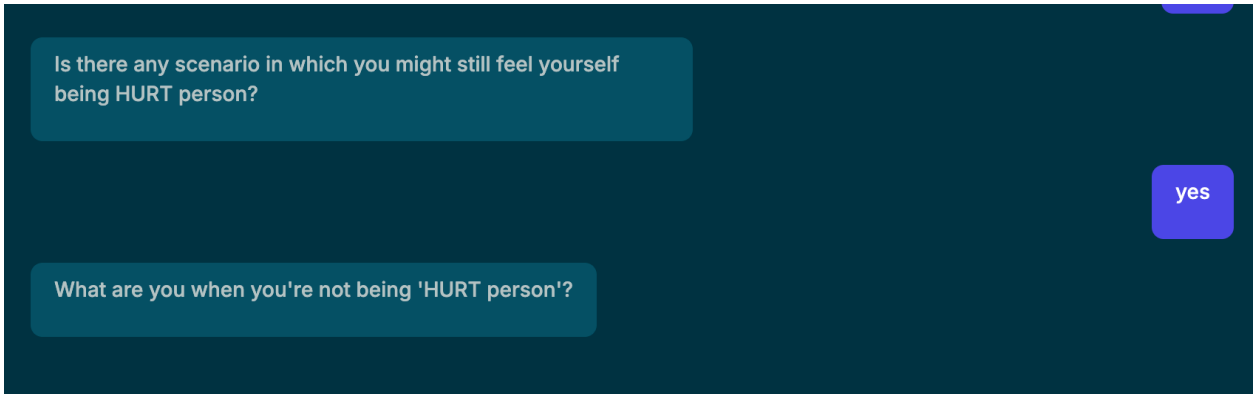
“Ok no problem. Let’s work on the trauma in terms of how you feel about it now, so you don’t have to recall the actual memory. Tell me in no more than a few words: how do you feel now about the fact that this happened?”

2.



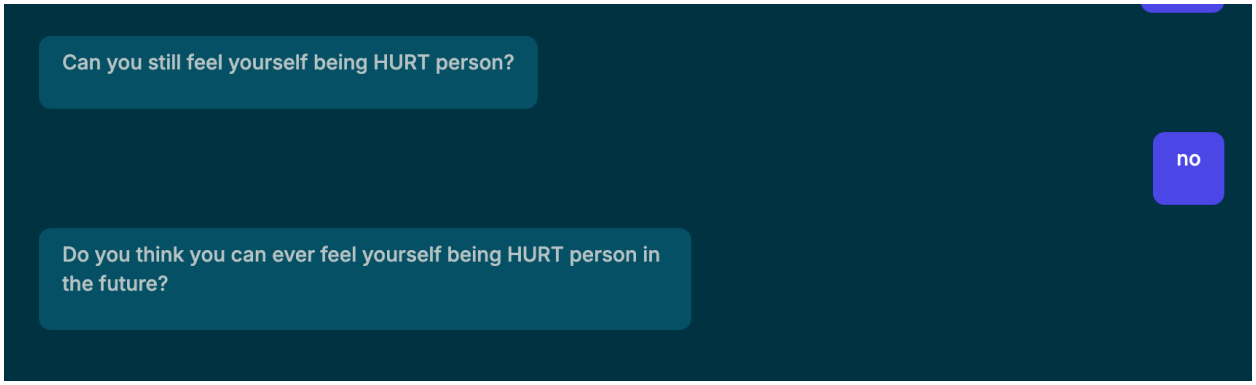
Here I am going back from Step 5 first checking question (future question)to Step 4A. It should use the bridge phrase “Put yourself in the future and feel yourself being ‘HURT person’...what does it feel like?” It should only use this bridge phrase on the first cycle of Step 4.

3.



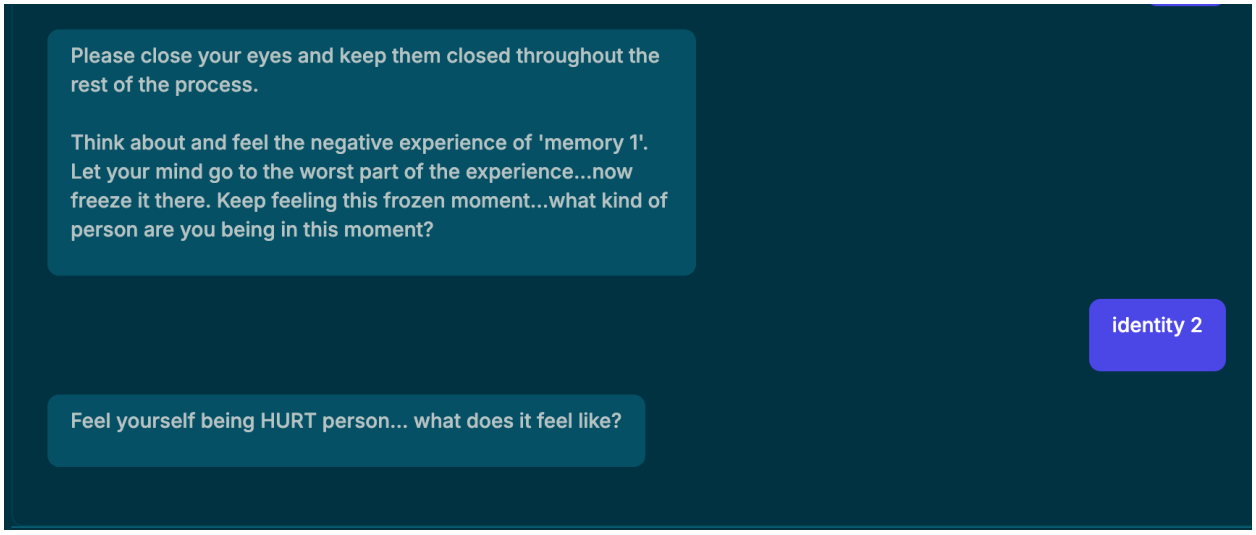
Here I am going back from Step 5 second checking question (scenario question) to Step 4A. It should use the bridge phrase "Imagine that scenario and feel yourself being 'HURT person'...what does it feel like?" It should only use this bridge phrase on the first cycle of Step 4.

4.



Here I have completed a cycle of Step 4 after going back to Step 4 from the second checking question of Step 5 (scenario question). Therefore the app should have gone back to the checking question I was on when going back to Step 5. However, it went back to the first checking question instead.

5.



A.

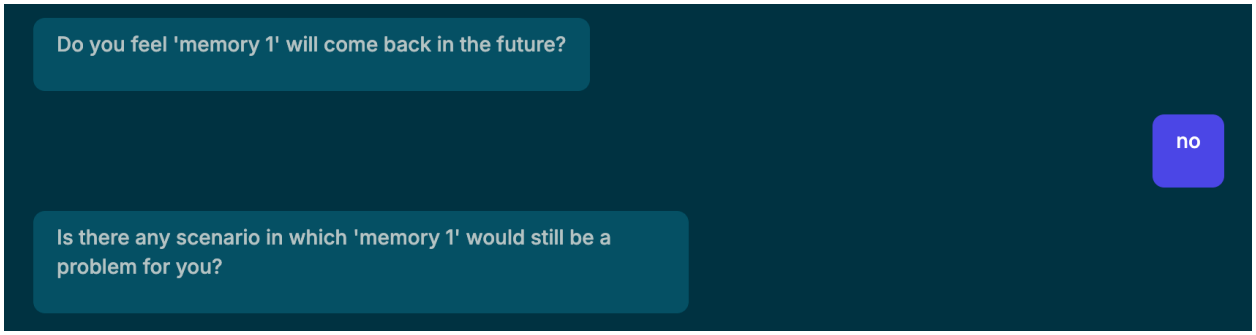
Here I have answered “yes” at Step 6 so the app has correctly gone back to Step 2. However it should only read the last part of step 2 since the user’s eyes are already closed and they have already recalled the frozen moment in step 6. The last part of Step 2 that it should read is as follows:

“Keep feeling this frozen moment…what kind of person are you being in this moment?”

B.

Then at Step 4A the app incorrectly asked me to feel the old identity of ‘hurt person’ that I gave in the first round of Steps 2-5, rather than the new identity I just of ‘identity 2’ which it should now use for the new round of Steps 3-5.

6.

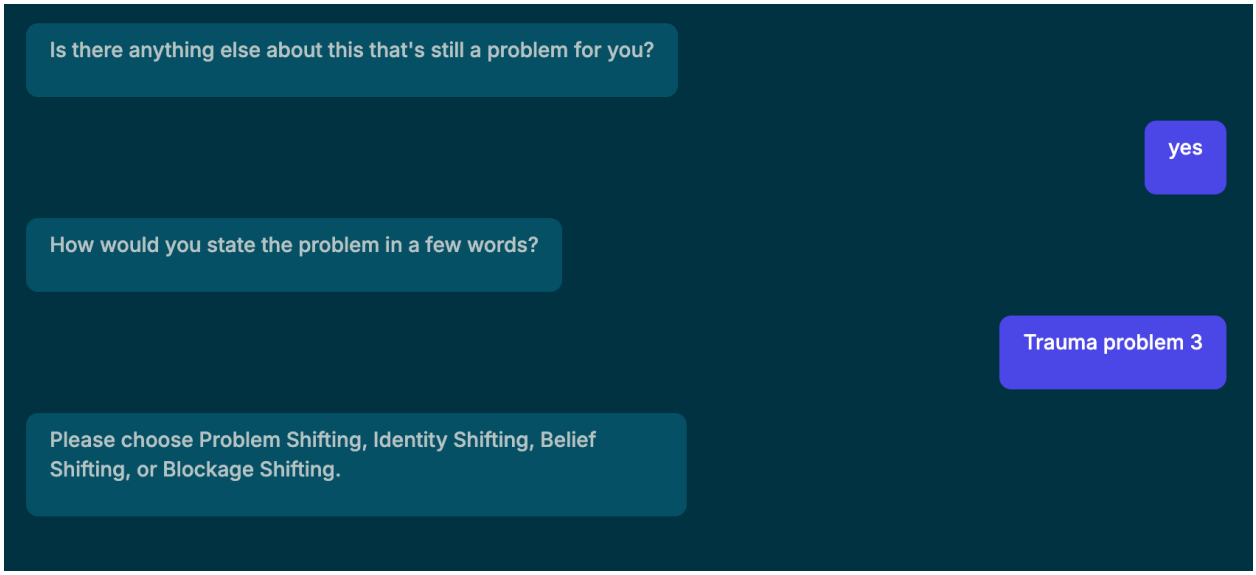


Here I am in Step 7 of Trauma Shifting - Digging Deeper. Initially I answered yes to the first digging deeper question (future question) and then chose to clear the problem using Blockage

Shifting. The app correctly took me back to the first checking question again to which I answered ‘no’.

However then it asked me the question “Is there any scenario in which ‘memory 1’ would still be a problem for you?”. This question is not in the Trauma Shifting digging deeper process.

7.



Here we are on the last digging deeper question of Trauma Shifting. The app said “Is there anything else about this that’s still a problem for you?”. But instead it should have said: “Take your mind back to ‘memory 1’, is there anything else about this that’s still a problem for you?”

Then I answered ‘yes’ and defined a new problem. It then correctly asked me which method I would like to use to clear the problem but it did not show the usual buttons to make the choice with.
